

STEM talk and workshop by CEDD

Today representatives from the Civil Engineering and Development Department (CEDD) of the government came to conduct a STEM talk and workshop for our S.3 students during the Life-wide learning lessons. An exhibition of Geology and Hong Kong Slope Safety is also held in the covered playground for the rest of this week. Students showed keen interest in understanding more about Hong Kong geology, scientific knowledge of landslides, landslip prevention and mitigation, climate change, and sustainable development in engineering.
